

You need 8 core pages to cover all current features cleanly. Build them in this order for the 4-hour MVP.

1. Home / Landing Page

Route: `/`

Purpose

- Explain the product in one screen.
- Act as navigation hub to report form, gallery, decode page, and reviewer console.

Key content

- Title: "Hidden Reports, Visible Art."
 - Short explanation that this is a whistleblowing-through-art prototype (no legal/production guarantees).
 - Primary buttons:
 - "Create a Hidden Report" → `/report/new`
 - "Browse Artworks" → `/gallery`
 - Small links:
 - "Decode with key" → `/decode`
 - "Reviewer console" → `/reviewer/login`
 - Ethics block:
 - "Prototype only, not for real emergencies."
 - "Not for planning crime or coordinating harm."
-

2. Create Report Page (Form)

Route: `/report/new`

Purpose

- Let a whistleblower submit a report anonymously with minimal fields.

UI sections

- Page title: "Create a Hidden Report."
- Form fields:
 - Category dropdown (Corporate / Government & Institutions / Other).
 - Location context (short text, no exact address).

- Secret description (textarea, main payload).
 - Optional external URL (no file upload in MVP).
 - Inline acceptable-use notice right under the description textarea:
 - “For ethical whistleblowing only; not for planning crime or sharing illegal content.”
 - Buttons:
 - Primary: “Generate Hidden Artwork.”
 - Secondary: “Clear form.”
 - Error banner area for validation/API errors.
-

3. Report Confirmation & Artwork Page

Route: `/report/confirm`

Purpose

- Show the user the generated artwork and the one-time decode key.

UI sections

- Title: “Your Artwork & Secret Key.”
 - Artwork preview area:
 - Deterministic abstract SVG/Canvas pattern based on the report’s id/category.
 - Label: “Artwork ID: {id}.”
 - Secret key panel:
 - “Your secret key: {decodeKey}” in monospace box.
 - “Copy key” button.
 - Strong warning text: “If you lose this key, the report cannot be decoded. The system cannot recover it for you.”
 - Next steps text:
 - Explain that sharing Artwork ID + key via secure channel allows trusted decoding.
 - Fallback UI if user refreshes and key is lost:
 - “This page no longer has access to your secret key; the report will remain unreadable without it.”
-

4. Public Gallery Page

Route: `/gallery`

Purpose

- Public “art site” view with no access to plaintext secrets.

UI sections

- Banner:
 - “Visual feed from a whistleblowing prototype. Artworks may contain hidden encrypted reports; only authorized reviewers can decode them. No sensitive text is shown here.”
 - Grid of artwork cards:
 - Artwork thumbnail (generated pattern from id/category).
 - Creation date (short or “3 hours ago”).
 - Vague category icon (e.g., building / institution / dot).
 - No title/description or secret text.
 - Optional footer note about mock “risk ring” being future/placeholder only.
-

5. Trusted Decode Page

Route: `/decode`

Purpose

- Anyone with Artwork ID + decode key can reveal full report content.

UI sections

- Title: “Decode a Hidden Report.”
 - Form:
 - Artwork ID (Report ID) input.
 - Decode key input (password-style with show/hide).
 - Button: “Decode report.”
 - Result area:
 - On success: show category, location context, description, optional external link, created date, status.
 - On failure: generic error “Cannot decode – ID/key mismatch.”
 - Small ethics note:
 - “Decoded content is for investigation by trusted reviewers only; do not redistribute sensitive information.”
-

6. Reviewer Login Page

Route: `/reviewer/login`

Purpose

- Single trusted reviewer logs in to access console.

UI sections

- Title: "Reviewer Console Login."
 - Login form:
 - Username.
 - Password.
 - "Sign in as reviewer" button.
 - Error message slot: "Invalid credentials" etc.
 - Info text:
 - "This console is for a trusted reviewer in this prototype. Do not share these credentials."
-

7. Reviewer Console – List Page

Route: `/reviewer/reports`

Purpose

- Reviewer sees queue of all reports with minimal columns and can open details.

UI sections

- Top bar:
 - "Reviewer Console" title.
 - Logged-in reviewer name and "Logout" button.
 - Subheader text:
 - "Reports are routed to reviewers; no direct messaging between users."
 - Filters:
 - Status filter dropdown: All / New / In review / Closed.
 - Table of reports:
 - Columns: Report ID, Created date, Category, Status.
 - Each row clickable → detail page.
 - Empty state: "No reports yet."
-

8. Reviewer Console – Detail Page

Route: `/reviewer/reports/:reportId`

Purpose

- Reviewer sees full decrypted report and can update status and internal notes.

UI sections

- Breadcrumb: "Reports > {Report ID}."
- Header:
 - "Report {Report ID}."
 - Short warning: "Trusted reviewer view. Do not share or copy sensitive content outside approved channels."
- Metadata section:
 - Category and icon.
 - Location context.
 - Created date/time.
 - Current status.
- Report body:
 - Full description text (scrollable).
 - Optional external link as clickable URL.
- Reviewer actions:
 - Status dropdown: New / In review / Closed.
 - Internal note textarea: "Internal note (not visible to reporter)."
 - "Save changes" button.
- Governance note:
 - "Reports flow one-way from reporter to reviewer; there is no chat or reply feature to prevent misuse or coordination."

If you want, the next step can be: list exact APIs each of these 8 pages calls, but for now these are all the pages you need for the MVP.
